UNIVERSAL PAIN ASSESSMENT TOOL

This pain assessment tool is intended to help patient care providers assess pain according to individual patient needs. Explain and use 0-10 Scale for patient self-assessment. Use the faces or behavioral observations to interpret expressed pain when patient cannot communicate his/her pain intensity.

VERBAL DESCRIPTOR SCALE: 0 1 2 3 4 5 6 7 8 9 10

WONG-BAKER FACIAL GRIMACE SCALE

ACTIVITY TOLERANCE SCALE: NO PAIN | CAN BE IGNORED | INTERFERES WITH TASKS | INTERFERES WITH CONCENTRATION | INTERFERES WITH BASIC NEEDS | BEDREST REQUIRED

PUPIL SCALE (mm)

CLABSI MAINTENANCE & BUNDLE CHECKLIST

ankura hospital for women & children | 9M

Patient Name : B/O prathyusha Age / Sex : 20|M Ward/Room : NICU

MR.No.: 16260 8058 Name of the consultant : Dr. S. MULKI

Diagnosis : RD - RDS - TTNB Date of Insertion : 18/6/26

DOA : 17/6/26 Indications : _____

Inserted by : _____

CLABSI Bundle (At the time of insertion tick the following)

	Yes	No
Hand washing (Surgical Hand Washing)	✓	
Maximal Barrier, Precautions upon incision (Cap, Mask, Gown, Gloves)	✓	
Insertion site swabbed with 2% Chlorhexidine / alcohol 70%	✓	
Sterile drape & Asepsis maintained throughout the incision procedure	✓	
Insert using Aseptic technique	✓	

Maintenance Bundle

Date	18/6						
Hand hygiene	✓						
CVC Dressing change	✓						
Evidence of inflammation	x						
Blood at insertion site	x						
Any Peeling of dressing	✓						
Clean CVC Site	✓						
Examine the Dressing	✓						
Use sterile transparent dressing	✓						
Scrub the Hub with 70% Alcohol swab	✓						
PPE	✓						
Review Catheter necessity daily & remove promptly	✓

BIOCHEMISTRY

C-REACTIVE PROTEIN (CRP)

Test Name	Result	Unit	Biological Ref. Interval	Method
C-Reactive Protein (CRP)	0.15	mg/L	0.01 - 6.00	Immunoturbidimetry

Interpretation :

- In many cases the changes in plasma CRP level precede changes in the clinical symptoms.
- The degree of elevation of CRP reflects the mass or activity of the inflamed tissue and in acute inflammation or infection correlates well with disease activity.
- Because the increase is non-specific, it cannot be interpreted without a complete clinical history, and even then, only by comparison with previous values.
- A persistently raised CRP level generally indicates that therapy is ineffective.
- Normal CRP levels do not exclude the presence of minor degrees of acute, localized inflammation or some chronic diseases such as SLE and ulcerative colitis.

ASPARTATE TRANSFERASE (SGOT / AST)	**80 H**	U/L	10.00 - 50.00	IFCC
ALKALINE PHOSPHATASE (ALP)	94	U/L	83.00 - 248.00	Colorimetric Assay
TOTAL PROTEIN	4.9	mg/dL	<15	Turbidimetric
Albumin	3.5	g/dL	2.8 - 5.2	
Globulin	**1.4 L**	g/dL	2.1 - 3.5	Calculated
A/G Ratio	2.5	-		

Liver function tests help diagnose liver disease, determine its severity, and identify its type. These tests are typically done together, and abnormal results can indicate hepatic etiology. If multiple tests are abnormal at the same time, it's likely due to a liver problem, but if only one test is abnormal, it may be due to some other medical condion which shall be correlated clinically.

POTASSIUM SERUM	4.6	mmol/L	3.40 - 5.10	
CHLORIDE SERUM	106	mmol/L	97.00 - 107.00	

Interpretation :

A kidney functiontest is a collective term for a variety of individual tests and procedures thatcan be done to evaluate how well the kidney is functioning. Many conditions canaffect the ability of the kidneys to carry out their vital functions. Some leadto a rapid (Acute) decline in kidney function others lead to a gradual (Chronic)decline in function. Both result in a buildup of toxic waste subset done onurine samples. As well as on blood samples. A number of symptoms may indicate aproblem with yours kidneys. These include high blood pressure, blood in urinefrequent urges to urinate, difficulty beginning urination, painful urination,swelling in the hands and feet due to a buildup of fluids in the body. A singlesymptom may not mean something serious. However, when occurring simultaneously,these symptoms suggest that your kidneys are not working properly kidneyfunction tests can help determine the reason Electrolytes are present in thehuman body and the balancing act of the Electrolytes in our bodies is essentialfor normal function of our cells and organs. There has to be a balance Ionizedcalcium this test if you have signs of kidney or Parathyroid disease. The testmay also be done to monitor progress and treatment of these diseases.

BLOOD GROUPING AND RH TYPING

Test Name	Result	Unit	Biological Ref. Interval	Method
BLOOD GROUP	"O"			Slide Agglutination Method
RH TYPING	Positive			

Comments / Interpretation:

- Reconfirm the Blood Group & Rh Typing along with cross matching before blood transfusion.
- Recent blood transfusion, if any, interferes with interpretation of blood grouping .
- The blood group and Rh antigen may change in the new born, hence please repeat the test after 6 months.
- Subgroups and Bombay blood group needs to be further verified.

MICROBIOLOGY

CULTURE AND SENSITIVITY - AUTOMATED/VITEK , BLOOD

Test Name	Result	Unit	Biological Ref. Interval	Method
SPECIMEN TYPE	BLOOD			Automated colorimetric microbial detection and identification by Vitek 2 compact
Culture Result	PRELIMINARY 1: No bacterial growth seen after 24 hours of aerobic incubation.			

Note:
The BACT/ALERT system is an automated continuous monitoring system for blood cultures that detects microbial growth by measuring color change caused by production. Microbial metabolism releases , altering pH and changing the bottle sensor color from green to yellow. The system monitors this change in real time; bottles remain undisturbed during incubation and are removed after 7 days if no growth is detected.
